

Arduino rtc DS1307

Real-Time Clock DS1307 Module includes 12 pins. However, for normal use, it needs to use 4 pins: **VCC**, **GND**, SDA, SCL:

- ◆ **SCL pin:** is a serial clock pin for I2C interface.
- ◆ **SDA pin:** is a serial data pin for I2C interface.
- ◆ **VCC pin:** supplies power for the module. It can be anywhere between 3.3V to 5.5V.
- ◆ **GND pin:** is a ground pin.

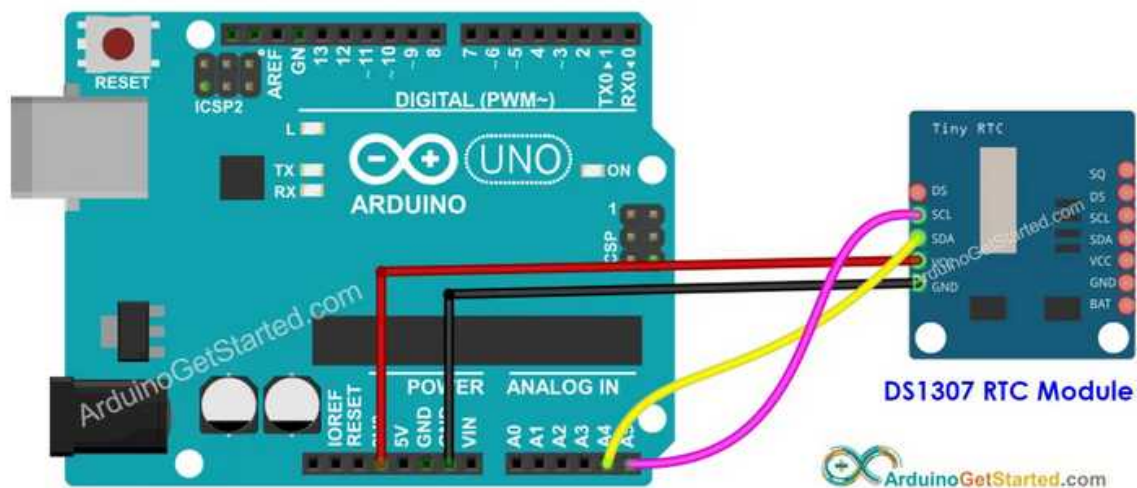

Battery Holder

The DS1307 Module also has a battery holder.

- ◆ If we insert a CR2032 battery, It keeps the time on module running when the main power is off.
- ◆ If we do not insert the battery, the time information is lost if the main power is off and you need to set the time again.

Arduino - DS1307 RTC Module

DS1307 RTC Module	Arduino Uno, Nano	Arduino Mega
Vin	3.3V	3.3V
GND	GND	GND
SDA	A4	20
SCL	A5	21
